

PRINTING SUPPLIES DIRECT

Subtractive Single Sided Newspaper Plates

Features:

➤ The PSD Newspaper Plates cut overall costs by reducing paper and ink usage. Quick roll up after roll changes saves you time. No more scumming, tinting, toning or corrosion spots (black spots).

Color: Dark Green – Blue after developing

Safelight: Use only under yellow fluorescent safelight

Exposure: To a solid 3-4 on a Stauffer 21 Step Guide

Hand Development: When hand developing and using a new sponge, be sure to rinse the sponge 5 or 6 times until the foam disappears. Pour the developer on the sponge away from the plate. Bring the sponge to the plate and develop left to right, top to bottom, being sure to completely develop all four edges of the plate. Rinse the plate off and use Subtractive Finisher if required. If after developing the image looks weak, you are over-developing.

Machine Development: When changing the competitors' developer to our developer, it is advisable to install new sponges and to rinse them as described above under hand developing. If the image looks weak, then speed the developing machine up a little at a time until the image looks strong.
